I'm a software engineer specializing in Android/iOS mobile development and backend engineering. I'm also willing to learn new languages and frameworks if needed. Building software has developed into a passion of mine, as it offers an engaging challenge and an opportunity to improve my skills. As for my objective, I'm looking for part-time or full-time employment utilizing my skills and experience.

Languages & Frameworks

- Python
- C# / .NET
- Javascript
- SQL (PostgreSQL, MySQL, SQLite)

- Xamarin.Forms
- Django / REST API
- Git
- HTML / CSS

Experience (check out my code on Github at https://github.com/ytrevor81)

Mobile Engineer & Backend Engineer

Squid Shock Studios – May 2020 to Present (Reference: Chris Stair squidshockstudios@gmail.com & phone number can be provided on request by employers)

- Android/iOS developer responsible for full app build, testing, and deployment on the Play Store and App Store. Apps are built using the Xamarin.Forms framework, using C# and .NET.
- Backend engineer responsible for building, deploying, and managing a REST API using Django (Python) on a VPS Linux server, utilizing a PostgreSQL database.

Full Stack Engineer

Freelance – October 2018 to May 2020

- Web developer responsible for building and managing professional websites for various clients using HTML, Bootstrap CSS, and Javascript.
- Built and managed a Django (Python) website from scratch using HTML, CSS, and Jquery for frontend development, utilizing a MySQL database. Website is no longer active, but the code is available on Github (https://github.com/ytrevor81/NFL-Stats-Library/)
- Various Python programming apps ranging from data analysis and web scraping. The code for these applications are available on Github, or you can visit my website at https://trevoryoungquist.com/

Education

MARCH 2016

Political Science (B.S.) / Portland State University, Portland, Oregon, USA
